SPX Communication Technology Announces Quick Ship Program for Copper Transmission Line Components

Orders to Ship Within 24 Hours or the Freight is Free

RAYMOND, Maine — June 8, 2011 — SPX Communication Technology (formerly Dielectric) today announced its Quick Ship program for transmission line components. Under the new initiative, SPX stocks a wide variety of commonly used parts for 1 5/8-inch through 6 1/8-inch transmission lines, and guarantees that the components will ship within 24 hours or the freight is free.

“We are very excited to bring this highly sought after service to our valued customers,” said Roger Cote, vice president and general manager of SPX Communication Technology. “In time-sensitive installations, the ability to support requests from the field quickly is critical to the success of a project. We are stocking a wide range of transmission line parts — from elbows and flange fields to reducers and vertical spring hangers. These commonly used parts are ready to ship within 24 hours. And as a sign of our commitment to our customers, if we can’t meet that deadline, then the freight is on us.”

To receive a price list for SPX’s stocked transmission line components, email dcsales@spx.com. Information on the full range of SPX Communication Technology’s antenna systems is available at www.spxcomtech.com.
